

Advanced Endpoint Protection

Today, it's a matter of **when, not if** your organization will fall victim to a successful cyberattack.

While employee education is one of the best methods to prevent an attack in the first place, Advanced Endpoint Protection is one of the best methods to contain and recover from the ones that will inevitably slip through.

This package combines **multiple software tools, Artificial Intelligence, and a fully-staffed Security Operations Center** to help stop, investigate, and remediate threats to your security. And it happens exactly where the trouble starts: on your company desktops and laptops.

FEATURES

- 24/7/365 Security Operations Center (SOC) monitoring and remediation of threats to stop malicious activity in its tracks.
- Security profiling that detects when a workstation rises above a certain security threshold based on multiple indicative factors.
- Office 365 risk alerts to keep your email and files secure.
- Webroot DNS with content and URL filtering to detect and block malicious websites.
- Dark Web monitoring for up to 2 domains to identify compromised accounts.
- Ransomware Rollback feature, with an insurance policy that covers \$1,000 per compromised device towards the ransom payment, up to \$1,000,000.
- Vulnerability reporting upon request.

PRICING

We'll manage and fully support this package for you for \$27 per workstation, which includes all licensing.

Implementation is a one-time investment of \$50 per person.

**TAKE IMMEDIATE,
DEFINITIVE ACTION**

**TO IDENTIFY AND ELIMINATE VIRUSES,
RANSOMWARE, AND OTHER MALICIOUS
ACTIVITY ON YOUR COMPANY
WORKSTATIONS.**

**THIS IS THE ULTIMATE PACKAGE FOR
SECURITY PEACE OF MIND.**
